

M.SKILL WW Plant Inspection Scene

(Product Manual)

M.SKILL WW Plant Inspection Scene is a lightweight reference scene designed for layout planning, spatial understanding, and inspection visualization in wastewater treatment facilities. It provides a minimal and practical environment that represents typical inspection conditions around treatment tanks and plant structures.

1. Key Features

- **[UPDATE!]** Authentic Plant Audio: We have integrated real environmental and aeration sounds recorded directly from actual wastewater treatment plant facilities. This update brings unparalleled auditory realism to your spatial checks and visualization projects.
- Visual Inspection Planning: Designed to support concept validation, layout studies, and inspection route visualization for industrial VR/AR workflows.
- Optimized Water Animation: Includes a simple vertex-based water surface animation. It provides subtle surface movement designed to suggest aeration and water activity , while remaining highly optimized.
- Camera Switching System: Multiple fixed cameras are strategically placed for inspection-style viewpoints.

2. Contents

The scene includes the following key elements:

- Open treatment tank structure and a maintenance pit for spatial reference.
- Walkable platforms, stairs, and handrails representing typical inspection routes.
- Camera Switcher Script (Allows for simple viewpoint comparison).
- **[NEW]** Authentic Audio Assets (2D Ambient environment noise & 3D Aeration bubbling sounds).

3. Technical Details

Intended Use: Layout studies, concept environments for VR/AR, and scale verification.

- Collision Setup: Collisions are kept minimal and provided only for basic spatial understanding. Internal tank spaces are not navigable.
- Audio Setup: The scene features 3D spatial audio for the aeration tanks (sound becomes louder and directionally accurate as you approach) and 2D ambient audio for continuous background plant noise.

4. Usage

(1).Scene Exploration: Open the provided scene to view the layout and

equipment placement.

(2).Camera Switching (Important!): To experience the different inspection viewpoints, enter Play Mode (Game View) and press the "C" key on your keyboard. This will cycle through the fixed cameras in the scene.

(3).Audio Experience: As you press the "C" key to switch cameras, listen closely. The 2D ambient plant noise will play continuously, while the 3D aeration sound will dynamically adjust based on the active camera's proximity to the treatment tank.

(4).Customization: Users are encouraged to modify layout elements, add industrial equipment models, or replace the camera system to suit their own workflows.

5. Notes

This asset is not intended for gameplay, character-based simulations, accurate physical/safety simulations, or detailed fluid dynamics. It is intentionally simple to allow easy extension and modification, focusing on clarity of purpose rather than visual complexity.
